

BHARATH CHAVALA | FULL STACK JAVA DEVELOPER

bharath.chavala.dev@gmail.com | +1 (417)-351-7352 | [LinkedIn](#) | [Portfolio](#)

SUMMARY

With **6+ years** of experience as a Software Engineer, contributing to all phases of the **Software Development Life Cycle (SDLC)**, encompassing conceptualization, architecture, development, and deployment of web-based enterprise business applications using **Angular/JAVA** technologies.

- Experience in developing web applications with various open-source frameworks like DAO, Spring (including **Spring Core, Spring JDBC, Spring Cloud, Spring Rest, Spring Boot, Spring MVC**) and ORM frameworks like **Hibernate, JPA, Struts**.
- Proficient with **JavaScript, AngularJS, React JS, jQuery, AJAX, JSON, Bootstrap** for dynamic and responsive applications.
- **Crafted** reusable UI components and design systems with **AngularJS, Bootstrap, and Material Design**, ensuring consistency across the application.
- Developed and maintained scalable web applications using **Angular (v18+), TypeScript, JavaScript, HTML, CSS**, following modern architectural patterns and **browser performance** best practices.
- Implemented comprehensive **unit and integration testing** using **Jest, Jasmine, and Karma**, ensuring high code quality, reliability, and test coverage.
- Applied **J2EE design patterns**, including Singleton, Prototype, Session, Request, Global, DAO, and Front Controller, to enhance application architecture while adhering to **SOLID principles** for scalable, maintainable, and efficient code design.
- Good knowledge of **SOAP and RESTful API** interfaces in Java 8. I created and executed both load and functional tests for web services.
- Developed high-throughput, non-blocking RESTful APIs using **Spring WebFlux**, leveraging **Mono** and **Flux** for reactive data streams and implementing backpressure handling, efficient thread management.
- Designed and implemented a scalable **microservices architecture** for Spring Boot applications using **Spring Cloud components**, including **Config Server** for centralized configuration, **Eureka Server** for service discovery, **API Gateway** for routing, and **Resilience4j** circuit breakers for fault tolerance and resilience.
- Designed and implemented robust data processing workflows using **Spring Batch**, integrating with **Spring Boot** applications to handle large-scale, scheduled, and fault-tolerant ETL jobs across distributed systems.
- Expert knowledge of **data structures, computer logic and flow-charting**, program design methods and techniques, database vendor versions, compiler versions.
- Hands-on development experience with **Java 17**, covering key **OOP principles, Collections framework, Exception Handling, String manipulation, File I/O, and Concurrency** (using **Threads, Executors, and synchronization**) to build efficient and scalable web applications.
- Developed and executed unit and integration tests using **JUnit, TestNG, and Mockito**, ensuring reliable backend functionality in a microservices environment.
- Automated infrastructure provisioning using **Terraform** and **Ansible**, managed version-controlled deployments via **GitHub**, and containerized applications with **Docker**, orchestrated seamlessly using **Kubernetes** for scalable and reliable environments.
- Designed and implemented event-driven web applications using **Apache Kafka** integrated with **Spring and Spring Boot**, enabling high-throughput, fault-tolerant message processing.
- Built and managed **Kafka clusters**, ensuring scalability, high availability, and reliable data streaming across distributed microservices.
- Implemented **Kafka Avro serialization** with schema evolution support to enforce data consistency and improve interoperability between producers and consumers.
- Integrated **Spring Kafka** to handle consumer group management, offset commits, and rebalancing events, improving system resilience and processing efficiency.
- Configured **AWS DynamoDB** for storing and querying structured data related to patient profiles and preferences, ensuring high availability and performance.

- Leveraged **GraphQL** with **Apollo Server and Client** to build flexible, schema-driven APIs, enabling real-time data updates, and integrated with **Apache Kafka** to stream backend events.
- Designed and implemented **Redis** for **database storage, caching mechanisms, and message queuing**, optimizing application performance, scalability, and real-time data processing.
- Deployed and managed **Dockerized applications** on **Red Hat OpenShift**, leveraging **Kubernetes-native orchestration** for scalable, resilient enterprise workloads.
- Integrated **asynchronous messaging** in Spring Boot applications using **RabbitMQ, ActiveMQ, and IBM MQ**, enabling reliable communication, decoupled service interaction, and enhanced fault tolerance.
- Monitored and analyzed application performance using **Prometheus** and **Grafana** dashboards, and integrated **AWS CloudWatch** and **Splunk** for centralized logging, alerting, and real-time observability.
- Designed and optimized SQL queries for **RDBMS** like MS SQL Server; proficient with NoSQL databases including **DynamoDB, MongoDB, and Cassandra** for scalable data solutions.
- Automated deployments (**CI/CD**) using **Jenkins for Spring Boot apps on AWS**; proficient with build tools (Maven, Gradle) and version control systems (Git, Bitbucket, SVN).
- Been part of Automating the setup and management of **AWS S3 buckets** for secure and efficient data storage, including versioning, lifecycle policies, and access control configurations.
- Deployed Spring Boot-based microservices in Docker containers using **Amazon EC2 Container Service** and **Amazon Elastic Kubernetes Service (EKS)** for scalable and efficient orchestration, leveraging the AWS management console.
- Architected using **AWS services (EC2, S3, RDS, IAM, Lambda)**; implemented Step Functions **SQS, SNS, and DynamoDB**; expertise in **Route 53, ACM, CloudWatch, CloudTrail, NLB/ALB, and Bastion Services**.

TECHNICAL SKILLS

Methodologies	SDLC, Agile, Waterfall
Languages	Java (Java 8, 11, 17,21), J2EE, C, C++
Frameworks/Libraries	Spring Boot, Spring MVC, Hibernate, Swagger, JPA, Hibernate, Apache Camel, Spring MVC, Spring IOC, Spring AOP, Spring Cloud Spring Boot, Spring Security, Spring Data JPA
Scripting Languages	JavaScript, Type Script
Databases	MySQL, PostgreSQL, MongoDB, Cassandra, Dbeaver, DynamoDB, Oracle
Java/J2EE Technologies	Java, EJB, Servlets, Struts, Java Beans, Java Server Pages (JSP), JDBC
Web Development	jQuery, Angular 16, CSS3, HTML5, ReactJs, Bootstrap, JSON.
Application Framework	Spring 4.x/5.x, Spring MVC, Spring Security, Spring Boot, Spring ORM, Spring Cloud, Spring, Spring Batch
DevOps	Jenkins, GitHub, GitLab, Docker, OpenShift, Kubernetes, Amazon Web Services (AWS),
Version Control and Tools	Git, Bitbucket, SVN
IDE	IntelliJ, Visual Basic, Postman, Spring Tool Suite (STS)
Web/Application Servers	Apache Tomcat, IBM WebSphere, Oracle WebLogic, JBoss
Architecture and Queue	RESTful Microservices, REST API, Containerization, Rabbit MQ, Kafka
UML Tools/ Build Tools	ANT, Maven, Gradle, CI/CD, JUnit, Jira, Jest.
Operating Systems	Windows, Linux, MacOS, UNIX Scripting

WORK EXPERIENCE

Fidelity Investments, Remote, TX USA

Sep 2025 – present

Full Stack Java Developer

- Experienced in both **Agile (SCRUM)** and **Waterfall methodologies**, adapting development practices based on project needs to ensure timely delivery, clear documentation, and stakeholder alignment throughout the software development lifecycle (SDLC).
- Expertise in Front-End Development using **Angular 19**, **JavaScript**, **jQuery**, **XML**, **JSON**, **CSS3**, **HTML5**, **Bootstrap**.
- Created and consumed **REST APIs** in **Angular** using **HttpClient**, applying interceptors for centralized error handling and token-based authentication.
- Developed complex **Angular** components using **Lifecycle Hooks** like **ngOnInit**, **ngAfterViewInit**, and **ngOnDestroy** to manage component behavior efficiently.
- Leveraged **RxJS Observables and Subjects** to implement reactive programming patterns and real-time data handling.
- Designed scalable web applications using the **Singleton** and **Prototype** patterns, managed user **Session** state across HTTP **Request** cycles, and implemented **Global** exception handling and logging for secure and maintainable architecture.
- Leveraged the core **Spring** framework to implement dependency injection (IoC), AOP, and transaction management for clean, maintainable architecture.
- Leveraged **Spring Boot Runners** by implementing **CommandLineRunner** and **ApplicationRunner** to execute startup initialization logic, preload data, validate configurations, and process application arguments immediately after the application context is initialized.
- Architected and deployed distributed systems using **Microservices architecture**, enabling independent service deployment, scalability, and fault isolation.
- Built and integrated loosely coupled **Microservices** with REST APIs, service discovery, and centralized configuration to enhance system resilience and agility.
- Monitored and optimized microservice health using **Spring Boot Actuator** and custom metrics endpoints.
- Containerized Spring Boot **microservices** and integrated them behind an **API Gateway** for unified access control.
- Migrated traditional **REST** endpoints to reactive APIs using Spring **WebFlux**, achieving improved throughput and reduced latency.
- Used Postman for **API testing**, **Swagger** for **API documentation**, and **Actuators** for monitoring and managing Spring Boot application health and metrics.
- Developed efficient data access layers using **Spring Data JPA** and **Hibernate**, proficient in **crafting Native Queries**, **JSQL Queries**, and **Custom Query Methods** for optimized database interactions.
- Implemented **SLF4J with Log4j** for flexible and configurable logging, enabling comprehensive log management and enhanced application diagnostics.
- Implemented fault-tolerant service calls using **Resilience4j circuit breaker patterns** to prevent cascading failures.
- Utilized the **Kafka Streams API** for real-time data processing and transformation, integrating it with existing data pipelines. Implemented Kafka Connect to integrate **Kafka** with various data sources and sinks, facilitating seamless data ingestion and export.
- Implemented **Reactive Programming** using non-blocking I/O to build scalable REST APIs, transitioning from the traditional **Thread-per-Request model** to an event-loop based **Reactive thread processing** architecture for improved throughput and resource utilization.

- Leveraged core features of Reactive Programming including **asynchronous execution**, **functional style composition**, and **event-driven data streams**, modeling data flow as reactive pipelines to process real-time streaming data efficiently.
- Implemented **Spring Security** with **JWT** for authentication, **OAuth2** for **authorization**, and **managed** both to ensure secure access control and protect sensitive resources.
- Integrated observability tools like **Prometheus**, **Grafana**, and **Elastic Stack (Elasticsearch, Logstash, Kibana)** into OpenShift to monitor cluster health, application metrics, and logs.
- Managed cloud environments efficiently by syncing **GitHub** commits with **Terraform** plans and applying changes through **Ansible** orchestration.
- Been part of Automating the setup and management of **AWS S3 buckets** for secure and efficient data storage, including versioning, lifecycle policies, and access control configurations.
- Deployed Spring Boot-based microservices in Docker containers using **Amazon EC2 Container Service** and **Amazon Elastic Kubernetes Service (EKS)** for scalable and efficient orchestration, leveraging the AWS management console.
- Deployed and managed **Spring Boot microservices on Kubernetes clusters (EKS)**, ensuring **high scalability** and reliability with **load balancing** using **AWS NLB** and **ALB**, optimized for performance and traffic distribution.
- Strong experience **working with RDBMS** like **Oracle** and **MySQL**, as well as **NoSQL databases** such as **Cassandra**, integrated seamlessly with backend applications using **Spring** and **Spring Boot** for efficient data access and persistence.
- Implemented secure and efficient deployment workflows by leveraging **GitHub Actions**, **Terraform**, and cloud platforms like **AWS**.
- Established and maintained continuous integration and **continuous deployment (CI/CD)** pipelines for React projects, using tools **like Jenkins or GitHub Actions** for automated testing and deployment.
- **Implemented RESTful APIs and microservices** using **Spring Boot**, integrating with **AWS Lambda**, **DynamoDB**, and **S3** to enable serverless processing and distributed data storage.
- **Orchestrated event-driven workflows** by integrating **Spring Boot microservices with AWS SQS, SNS, and Step Functions**, enabling asynchronous communication and fault-tolerant processing.
- **Configured secure cloud deployments** using **IAM roles**, **Bastion Hosts**, and **ACM certificates**, while exposing Spring Boot services through **AWS ALB/NLB and Route 53 DNS management**.

Environment: Java 11, J2EE, AngularJS, React JS, HTML 5, CSS 3, JavaScript, Hibernate, JPA, Spring Boot, Spring Framework 5.x (including Spring MVC, Spring Data JPA, Spring Integration, Spring Cloud), Spring Web Flux, Apache Kafka, AWS, Hibernate, JUnit 5 and Mockito, PostgreSQL, MongoDB, Docker, Kubernetes, Jenkins, Git, Splunk, OAuth 2.0, WebSocket's, YAML, Swagger and Postman.

TD Bank, TX, USA

Jan 2023 – Aug 2025

Full Stack Java Developer

- Applied diverse methodologies such as **SDLC** and **Agile** to adapt project strategies based on evolving requirements, enhancing efficiency and adaptability in project delivery.
- Set up and manage **Angular Forms** with both template-driven forms and reactive forms, **ensuring seamless data flow**, robust form **validation**, and support for dynamic forms.
- Develop REST APIs for **Angular**, **Express**, and **MongoDB**, enabling **CRUD operations** and seamless integration with Angular's HttpClient module.
- Mastered React fundamentals, including **Virtual DOM vs. Original DOM**, **JSX**, and **ES6-based React Components**, to build efficient and scalable web applications.
- Developed interactive user interfaces using **Props & State**, **Stateful and Stateless Components**, and **Dynamic Rendering with JavaScript** for enhanced performance.

- Created dynamic UI interactions using **event binding, property binding, and two-way data binding** in **Angular** templates.
- Modularized codebases using **Angular modules (NgModules)** and **feature modules**, promoting encapsulation and code organization.
- Built responsive and accessible UIs using **Angular, HTML, CSS, and component libraries**, ensuring cross-browser compatibility and optimized rendering performance.
- Used Postman for **API testing, Swagger for API documentation**, and **Actuators** for monitoring and managing Spring Boot application health and metrics.
- Developed efficient data access layers using **Spring Data JPA** and **Hibernate**, proficient in **crafting Native Queries, JPQL Queries, and Custom Query Methods** for optimized database interactions.
- Implemented **SLF4J with Log4j** for flexible and configurable logging, enabling comprehensive log management and enhanced application diagnostics.
- Proficient in using **Spring Profiles** to manage different environments (e.g., **development, testing, production**), enabling flexible configuration management and seamless deployment across various stages of the application lifecycle.
- Optimized **Kafka consumer rebalancing** strategies within Spring Boot applications to minimize downtime and ensure seamless message consumption during scaling and failover events.
- Designed and optimized complex **SQL** queries with indexes and query optimization. Implemented database schema design and normalization for data integrity. Developed and maintained **stored procedures and functions** using **PL/pgSQL**.
- Integrated **GitHub** for version control and CI/CD pipelines, automating deployments to **AWS** with **Terraform** and related DevOps tools.
- Integrated observability tools like **Prometheus, Grafana, and Elastic Stack (Elasticsearch, Logstash, Kibana)** into OpenShift to monitor cluster health, application metrics, and logs.
- Implemented scalable messaging solutions using **Kafka and RabbitMQ JMS**, ensuring reliable, asynchronous communication between microservices for enhanced performance and fault tolerance.
- Configured **AWS DynamoDB** for storing and querying structured data related to patient profiles and preferences, ensuring high availability and performance.
- Deployed Spring Boot applications on **AWS EC2 with EBS, EFS, and S3** for storage, while integrating a **CDN** for faster content delivery and improved performance.
- Orchestrated containerized applications with **Kubernetes (EKS)** and managed **Docker containers**; leveraged **AWS Lambda** for event-driven serverless applications.
- Automated **CI/CD pipelines with GitLab CI/CD** and used Agile methodologies (JIRA) for project management. Provided ongoing support with tools like **Swagger** and **Postman for API** testing and monitoring.

Environment: Java 11, J2EE, AngularJS, React JS, HTML 5, CSS 3, JavaScript, Hibernate, JPA, Spring Boot 3.x, Spring Framework 5.x (including Spring MVC, Spring Data JPA, Spring Integration, Spring Cloud), Spring Web Flux, Apache Kafka, AWS, Hibernate, JUnit 5 and Mockito, PostgreSQL, MongoDB, DynamoDB, Docker, Kubernetes, Jenkins, Git, Splunk, OAuth 2.0, WebSocket's, YAML, Swagger and Postman.

Tata Consultancy Services, Hyderabad, India

Dec 2021 – Aug 2022

Full Stack Java Developer

- Experienced in delivering backend solutions using both **Agile (Scrum, Kanban)** and **Waterfall** methodologies, leveraging tools like **JIRA, Confluence** to manage sprints, track milestones, and ensure project transparency across the SDLC.
- Designed and implemented robust and scalable full-stack applications by integrating **ReactJS** for the front end, **Java** for the backend server, and **PostgreSQL** as the relational database.
- Proficient in Front-end development: **HTML5/CSS3, JavaScript, jQuery, Ajax, JSF, ReactJs, Bootstrap, AngularJS, Reactjs**.

- Designed and developed responsive and visually appealing interfaces using **React**, **Tailwind CSS**, and **React Bootstrap**, ensuring cross-device compatibility and modern UX.
- Implemented intuitive form controls and validation using **React Hook Form** with **React Bootstrap** inputs, enhancing user input flows.
- Leveraged **Spring IOC** and dependency injection to manage application components and enhance modularity, while utilizing **Spring AOP** to implement cross-cutting concerns such as **logging** and **security** in a clean and maintainable manner.
- Managed robust transactions, pagination, and **CRUD operations** to ensure data consistency, efficient data retrieval, and seamless user interactions within applications.
- **Tested** synchronous clients using **Mockito** and reactive APIs using **StepVerifier** and **WebTestClient**, ensuring code quality and performance.
- Migrated legacy REST clients from **RestTemplate** to **OpenFeign**, reducing boilerplate code and enabling declarative, maintainable service calls.
- Handled **Java exceptions** using **@ExceptionHandler** to ensure robust error management, developed **SOAP-based web services**, leveraged AWS for cloud infrastructure, designed and integrated Rest APIs, and utilized **MongoDB**, **Cassandra** for flexible, scalable data storage solutions.
- Implemented **Spring Security** with **JWT** for authentication, **OAuth2** for **authorization**, and **managed** both to ensure secure access control and protect sensitive resources.
- Proficient in using **Spring Profiles** to manage different environments (e.g., **development**, **testing**, **production**), enabling flexible configuration management and seamless deployment across various stages of the application lifecycle.
- Architected microservices with **dynamic service discovery**, **centralized configuration**, **fault tolerance** via **circuit breakers**, and distributed tracing with **Spring Cloud Sleuth**.
- Ensured database transactions adhered to **ACID properties (Atomicity, Consistency, Isolation, Durability)** to maintain data integrity and guarantee reliable transaction processing.
- Integrated a Spring Boot application with **Prometheus** as a data source and **Grafana** for monitoring, enabling real-time metric collection and visualizing performance insights.
- Integrated Kafka with **Spring Boot** applications to implement reliable **publish-subscribe messaging** architecture, improving system scalability and decoupling.
- Implemented schema validation using **Apache Avro** with Kafka, ensuring data consistency across microservices.
- Integrated **IAM (Identity and Access Management)** solutions like Okta for secure user authentication and authorization, ensuring compliance with industry standards and regulatory requirements.
- Utilized Postman for **API testing** and **Swagger** for auto-generating API documentation, ensuring seamless API development, testing, and integration with clear, interactive documentation.
- Managed cloud environments efficiently by syncing **GitHub** commits with **Terraform** plans and applying changes through **Ansible** orchestration.
- Provisioned and managed cloud infrastructure using **Terraform** across **AWS** and **Azure**, enabling scalable and consistent deployment environments.
- Automated provisioning and management of AWS resources including **EC2**, **S3**, **RDS**, and **VPC configurations**.
- Managed version control using **GitHub** while orchestrating **Dockerized** applications on **Kubernetes (K8s)**, streamlining **CI/CD** workflows and enhancing deployment scalability across projects.

Environment: Java 8, J2EE, XML, CSS, Java Script, HTML, Angular.js, ReactJs, Typescript, JSP, Hibernate, PostgreSQL, SOAP, REST API, Servlets, Spring 4.0, Spring MVC, Spring Boot, Struts, Kafka, Docker, Kubernetes, Micro services, AWS, Eclipse, GIT, Maven, Log4j, JUnit.

- Implemented design patterns and architected J2EE solutions with **Spring, Struts, Hibernate, Servlets, WebLogic, and JSP**; utilized advanced **multithreading, Spring Boot, and IOC frameworks**, along with Dependency Injection and Service Locator Pattern.
- Implemented **RESTful APIs (using Spring MVC)** and integration layers (**with Spring Integration 5.x**) to enable secure and efficient data exchange between distributed systems.
- Developed and maintained **RESTful web services** using **Spring** and **Spring Boot**, leveraging **RestTemplate** for inter-service communication and implementing complete **CRUD operations** to support business functionalities.
- Configured **Apache Kafka 3.x** for reliable message processing, enhancing system scalability and enabling event-driven communication within the microservices architecture.
- Integrated JPQL and native queries with **Spring Data JPA** to build modular, scalable, and maintainable repository layers.
- Enabled asynchronous processing and improved system responsiveness by integrating **Kafka with databases, REST APIs, and message-driven microservices**.
- Developed reactive, non-blocking APIs using **Spring WebFlux** and **WebClient**, enhancing performance for high-concurrency scenarios.
- Deployed and managed **Spring Boot microservices on Kubernetes clusters (EKS)**, ensuring **high scalability** and reliability with **load balancing** using **AWS NLB** and **ALB**, optimized for performance and traffic distribution.
- Strong experience **working with RDBMS** like **Oracle** and **MySQL**, as well as **NoSQL databases** such as **Cassandra**, integrated seamlessly with backend applications using **Spring** and **Spring Boot** for efficient data access and persistence.
- Orchestrated **Docker containers** for packaging and deploying **microservices**, ensuring consistency across development, testing, and production environments.
- Established and maintained continuous integration and **continuous deployment (CI/CD)** pipelines for React projects, using tools **like Jenkins or GitHub Actions** for automated testing and deployment.
- Utilized streams and **multithreading** to enhance performance and migrated from a **monolithic to a microservice** architecture to improve scalability and modularize application components.
- Orchestrated cloud resources using **Terraform**, enhancing infrastructure as code practices within **AWS** and **Azure** environments.
- Implemented secure and efficient deployment workflows by leveraging **GitHub Actions, Terraform**, and cloud platforms like **AWS**.
- Developed stored procedures, functions, and **triggers** in **MySQL** and **PostgreSQL** to automate database operations and enhance data integrity and performance.
- Streamlined infrastructure provisioning through **Terraform**, collaborating via **GitHub** for version control and deploying to **AWS** ecosystems.

Environment: JDK1.8, JSP, Servlet, EJB, Spring, JavaScript, Hibernate, Multithreading, Typescript, ReactJS, Cassandra, Query, PostgreSQL, Struts, Design Patterns, HTML5, CSS3, JMS, XML, Eclipse, Apache, Kafka, Java 8.0, Struts, Webservice, AWS, SOAP, bootstrap, Microservices, Docker.
